Looking for AI and Big data engineers to our Applied Intelligence practice in Stockholm

Accenture Digital is one of Accenture’s five growth platforms and offers comprehensive portfolio of business and technology services across Digital marketing, eCommerce, Mobility services and Applied intelligence.

Applied intelligence practice at Accenture help our clients grow their business in new ways – by enabling them to achieve better performance through insights from data. Accenture works with organizations to develop analytic capabilities - from accessing and reporting on data to predictive modelling – to outperform the competition.

We will give you the opportunity to grow personally and professionally in a dynamic environment. Our projects are built on cooperation and teamwork and you will find yourself working together with other talented, passionate and dedicated consultants, all working towards a shared goal.

Do you follow the new technologies and have a desire to change the way business gets done? Do you want to implement emerging solutions for some of the most successful companies? If your answer is yes, and you are passionate about helping clients effectively manage enormous amount of data to generate knowledge and value, we want to meet you!

As an AI/Big data engineer your key responsibilities will be in implementing end-to-end analytics projects in cloud and in client premises. You will also participate in building integrations to client systems, third party API, testing and machine learning model development, refinement and productization.

We are looking for both experienced consultants and recent graduates. You preferably have some of the following qualifications and interest to grow on the others:

- Master's Degree or PhD in computer science, physics, maths or such
- Experience from analytics software development projects
Hands-on coding experience in coding languages such as Node.js, Java, functional languages, R, Python, C#, Scala, web or database development

Experience in traditional databases and ETL-tools and software development tools such as Jira, Git and SVN.

Experience and/or interest in designing and building Artificial intelligence solutions using third party API’s such as Microsoft Azure, Amazon Machine Learning, Google ML, IBM Watson etc

Experience and/or interest in working with open source eco-system components such as Tensorflow, Scikit learn, Hadoop, Apache Spark, Apache Flume and Apache Kafka.

Above this we also want you to

- Be an innovative, resourceful and collaborative problem solver
- Enjoy working in diverse teams
- Have good written and oral/presentation skills in both Swedish and in English
- Strong interest in growing your own technical skills

The position is based in Stockholm and may include travel

Why Accenture?

Because people enjoy working here; the work we do is challenging, interesting and meaningful. Accenture offers a unique career experience and unparalleled opportunity for you to grow and advance. We are driven by the best results but we never forget to support each other. We like to challenge our employees and give them the opportunity to shine and succeed. We invest heavily in our people’s growth and knowledge development. There is a possibility to participate in AI- and/or Big Data bootcamps.

Our best and only asset is our people. We believe they’re at their best when knowing what’s expected from them and we want to support them also in different life phases.

Interested? Make your move – apply online and attach your cv, application letter and salary request in English. We look forward to meet you!

Accenture welcomes and encourages applications from diverse backgrounds related to gender, age, ethnicity, culture, race, religion and belief, disability, nationality, sexual orientation and gender identity. Inclusion and diversity are fundamental to our culture and core values, providing an environment where everyone brings distinct experience, talent and culture to their work. We invite you to be part of this diversity!
